PROFILED SEALS

FOR ROOF TILE AND TRAPEZOIDAL SHEETS

Every inclined roof,
notwithstanding type of the
material used, features areas
of roof covering that need
sealing in order to avoid
ingression of leaves, rain,
snow and birds or others.

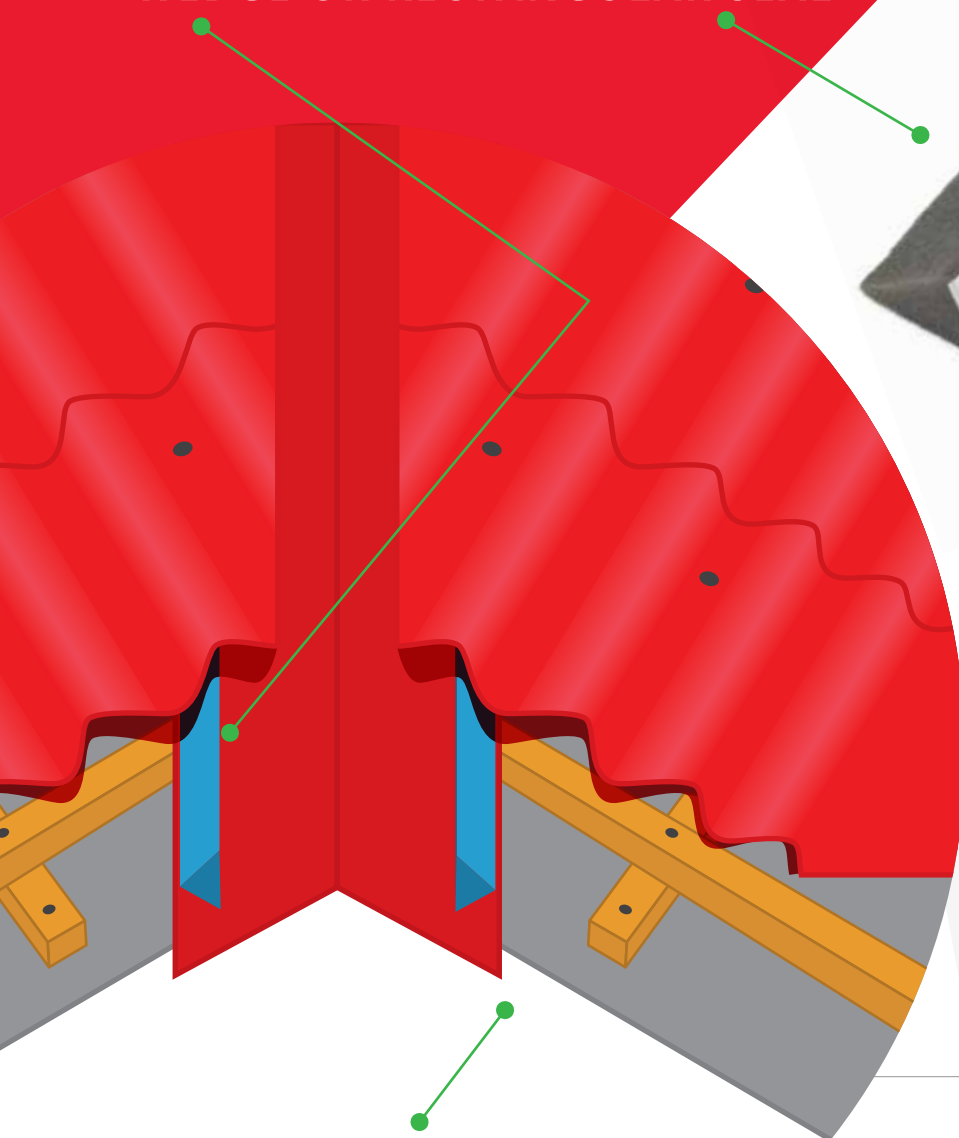

Solutions offered by Info-GLOBAL Fastening[®]
for most roof profiles available on the market
are in the form of universal and profiled
sealants.

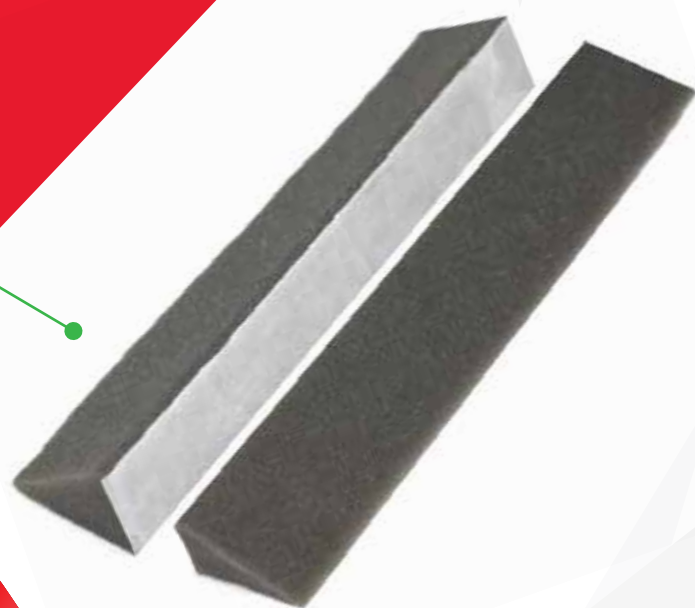

SELF-ADHESIVE WEDGES AND RECTANGULAR SEALS

Universal solution for valley gutters,
made of polyurethane foam (PUR).

WEDGE OR RECTANGULAR SEAL

*An example use of wedge
when installing roof covering*

ok. 1000mm

PACKAGE

100/150/200 items,
depending on seal type

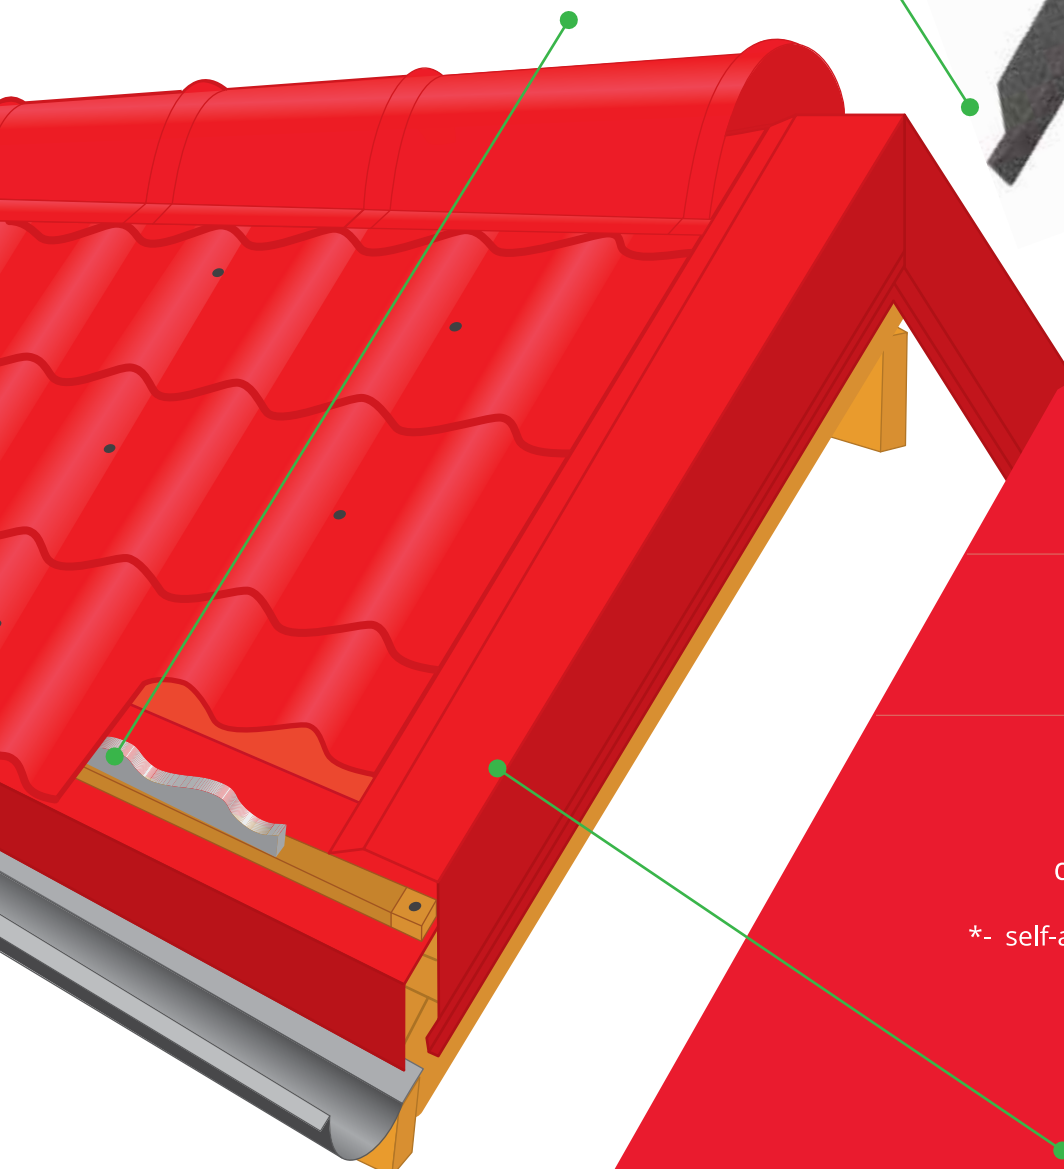

*- self-adhesive seal type available

*An example use of profiled seal
when installing roof covering*

FINAL INFORMATION

All seals produced in the process of preparing sealings for particular profiles feature two sides. We mark them as follows:

A or 01

intended to seal the ridge, eg. T18A, KG01

B or 02

intended to seal the gutter drip, eg. T18B, KG02

If our client orders side A intended to seal the ridge, we also provide him/her with side B which may be used to seal the gutter drip with no extra costs accrued and vice versa.

Info-GLOBAL Fastening[®] offers nearly 230 types of profiled seals, which fit most roof tile and trapezoidal sheets produced by most recognized manufacturers from Poland and Europe.

* On request, we can prepare any type if we are provided with a technical drawing *
